

Case Study

Rotherham Hospital choose GDUK to open doors

GDUK Door Solutions has completed the installation of a number of new automatic pedestrian doors and industrial doors at Rotherham Hospital, part of the Rotherham NHS Foundation Trust.

Gilgen doors are designed to improve ease of access, security and energy efficiency and have been installed as part of a wider refurbishment programme at the hospital. The installation includes Gilgen FFM automatic pedestrian doors, industrial roller shutters and high speed doors.

Gilgen FFM folding pedestrian doors have been installed to the main entrance of the maternity wing and a main corridor leading to the Emergency Department. Gilgen FFM doors have proven their reliability in other locations throughout the hospital and are the preferred choice since they maximise the clear open width of the entrance for ease of use.

GDUK Door Solutions roller shutters have been installed to the loading area and match a shutter previously installed by GDUK. The coated steel automatic shutters feature an insulated panel that helps minimise heat loss. A digital key pad provides additional security along with a CCTV camera and secure office for authorised personnel.

A GDUK high speed door provides access from the hospital corridor to the loading area. Radio fob operated from each side, the high speed door features a blue fabric curtain with vision panel, full safety features and is integrated with a fire alarm system to failsafe open. High speed doors provide barrier free access to authorised vehicles whilst minimising heat loss along with improved cleanliness, reduced utility costs and lower carbon footprint.

In addition, two folding shutters have been installed to the maintenance bay of a hazardous waste disposal area. Installed side-by-side, the largest shutter is 5.9m wide by 2.7m high and provides secure access to this area of the facility.

Project Summary

Industry:
Hospital / Healthcare

Requirement:
Improved access, hygiene, security and reduced energy loss from a range of doors across the hospital complex

Products:
FFM Folding pedestrian doors
Insulated roller shutters
High speed doors
